

## Global Medical Coding Expertise

Our client is a teaching hospital located in Portland, Maine, with a staff of more than 6,000 people. Founded in 1874, it is the largest hospital in northern New England with the ability to house approximately 27,000 inpatients, provide care to more than 500,000 outpatients, and perform over 16,000 surgeries annually. Our client is structured as a non-profit, private corporation governed by volunteer trustees.

### The Challenge

Our client had a 6,000+ emergency room chart backlog. They were looking for a staffing partner with healthcare industry expertise who could provide them with experienced medical coders at a reasonable cost.

### The Solution

With more than 62 years of experience working within the medical and healthcare industry, ComforceHealth was able to meet the client's requirements immediately. We understood the client's requirements

and reviewed open requisitions. Our professional recruiters and business managers then sourced, screened, and initially placed four highly-qualified, full-time medical coders with the client and then added a fifth within two weeks.

### Skill Sets

- Emergency room
- Diagnostic
- SDS Diagnostic

### The Result

ComforceHealth leveraged its global coding expertise to provide a high-quality and cost-effective solution for the client. The engagement was originally scheduled to last for two months. However, due to our impressive performance and significant cost savings for the client, all five consultants are still working full-time with our customer five months later.
